Staff Engineer with 7+ years of experience designing scalable backend platforms, distributed systems, and cloud-native infrastructure. Built reusable platform services, authentication frameworks, scheduling systems, and AI evaluation tooling used across multiple products and millions of daily requests.

Professional Experience

SaaS Labs (JustCall)

Staff Engineer

Noida, Uttar Pradesh

Nov 2023 - May 2026

- Built a centralized authentication platform using **JWT authentication and rotating CSRF** tokens for secure multi-service communication, **handling ~7M authentication requests daily**.
- Architected reusable platform services and SDKs (**AuthClient, UserClient, LookupClient, CalSDK**) adopted across **5+ microservices**, standardizing service integrations.
- Designed and developed a reusable multi-tenant scheduling platform supporting **15,000+ calendars** and **1200+ bookings daily**, adopted across **JustCall and ServiceAgent**.
- Optimized Kubernetes resource requests, limits, and autoscaling policies based on Grafana observability metrics, reducing **cloud infrastructure costs by 10%** and decreasing **pod restart frequency by 25%**.
- Engineered **AI-powered voice agent workflows** by integrating **conversational AI**, and real-time backend tool execution, enabling **automated customer interactions at scale**.
- Developed **post-call AI intelligence pipelines** leveraging LLMs for **automated summaries**, structured notes, and smart chapter generation with timestamped insights.
- Built an **AI evaluation framework** enabling data-driven **model selection** and **release decisions** across engineering and leadership teams.
- Led backend architecture evolution of ServiceAgent, driving adoption of shared platform services, authentication standards, and scheduling infrastructure across 200+ paying customers.
- Mentored 4 engineers, led architecture reviews, and contributed to hiring and engineering standards.

Bajaj Finserv Health Limited

Backend Lead

Pune, Maharashtra

June 2021 - Nov 2023

- Led a team of 4 engineers and owned Patient, EMR, Authentication, and Appointment services for the DRx healthcare platform.
- Led ABDM/ABHA/HPR/HFR healthcare integrations under National Health Authority initiatives, enabling interoperability with India's digital health ecosystem.
- Designed scalable backend workflows supporting multi-clinic and multi-doctor operational models with reusable service abstractions and asynchronous processing patterns.

Jungle Works

Software Engineer

Chandigarh

June 2019 - June 2021

- Developed and scaled backend services for Tookan, a globally used logistics and delivery management platform supporting workforce and operational workflows.
- Architected fine-grained ACL authorization systems and led integrations with external business platforms including POS, payment, accounting, and eCommerce systems.

Technical Skills

Backend:	TypeScript, JavaScript, Node.js, NestJS, REST APIs, Microservices
Architecture:	System Design, Distributed Systems, Event-Driven Architecture, Docker
Databases & Caching:	PostgreSQL, MySQL, MongoDB, Redis
Cloud & Infrastructure:	AWS, Google Cloud Platform, Linux, Nginx, Pub/Sub, Kubernetes

Achievements & Projects

Winner - NHA UHI Hackathon (TypeScript, MongoDB, Node.js)

August 2022

Led the design and development of an award-winning Smart EMR platform during the NHA UHI Hackathon, establishing a modular, extensible backend and reusable workflow engine to accelerate product development.

Education

DIT University

B.Tech Computer Science Engineering

Dehradun, Uttarakhand

2015 - 2019
